

Course Management System

Purpose : With the help of this system, Computer Science students can search their courses and enroll for those courses, based on whether this course is getting offered in present quarter or not.

We have 2 portals for this website. One is for students and another is for admin.

Admin would be able to manage students and courses through this website.

Moreover, any guest can browse this website and take a glance on the courses which are available for computer science students.

Lets have a look on different screens.

Guest's Screen:

Home Page: Guests can click on course's link and look at the details of the courses.

Course Page

CSC 421: Applied Algorithms and Structures

This course covers techniques for designing and analyzing algorithms and structures in the context of computer application development.

Offering this quarter

Applied Algorithms and Structures	2018-01-02	2018-03-30	in class
-----------------------------------	------------	------------	----------

CSC 421

Applied Algorithms and Structures

Applied Algorithms and Structures	2018-01-02	2018-03-30	in class
-----------------------------------	------------	------------	----------

This course covers techniques for designing and analyzing algorithms and structures in the context of computer application development.
